A study performed by professional engineers with expertise in traffic engineering principles and practice, and certified as a Professional Traffic Operations Engineer, which reviews development of a specific property and analyzes how it integrates into existing and proposed thoroughfare network and any existing and ongoing traffic study. The report shall utilize existing data and conclusions from previous studies and identify improvements necessary to mitigate the impact of traffic generated by the development. Traffic Impact Analysis shall include the following elements:

- A. General Site Description. A detailed description of the roadway network within one (1) mile of the site, a description of the proposed land uses, the anticipated states of construction, and the anticipated completion date of the proposed land development shall be provided. This description, may be in the form of a map, shall include the following items: (1) all major intersections; (2) all proposed and existing ingress and egress locations; (3) all existing roadway widths and rights-of-way; (4) all existing traffic signals and traffic-control devices; and (5) all existing and proposed public transportation services and facilities within a one (1) mile radius of the site.
- B. Proposed Capital Improvements. The traffic impact analysis shall identify any changes to the roadway network within one (1) mile of the site that are proposed by any government agency or other developer. This description shall include the above items as well as any proposed construction project that would alter the width and/or alignment of roadways affected by the proposed development.
- C. Roadway Impact Analysis.
 - (a) Transportation Impacts:
 - (1) Trip Generation. The average weekday trip generation rates (trip ends), the average weekend trip generation rates, the highest average a.m. and p.m. hourly weekday trip generation rates, and the highest hourly weekend generation rates, for the proposed use shall be determined based upon the trip generation rates contained in the most recent edition of the Institute of Transportation Engineers, Trip Generation Manual; or shall be based upon data generated by actual field surveys of area uses compatible to the proposed use and approved by the City Manager (or designee) and/or the City Engineer.
 - (2) Trip Distribution. The distribution of trips to arterial and collector roadways within the study area identified in the General Site Description above shall be in conformity with accepted traffic engineering principles, taking into consideration the land use categories of the proposed development; the area from which the proposed development will attract traffic; competing developments (if applicable); the size of the proposed development; development phasing; surrounding existing and anticipated land uses, population and employment; existing and projected daily traffic volumes; and existing traffic conditions.
 - (b) Adequacy Determination. The roadway network included within the traffic impact analysis shall be considered adequate to serve the proposed development if existing roadways identified as arterials and collectors can accommodate the existing service volume, and the service volume of the proposed development, and the service volume of approved but unbuilt developments holding valid, unexpired building permits at a level of service "C" or above.

4. Intersection Analysis.

- (a) Level of Service Analysis. For intersections within the roadway traffic impact analysis area described in the General Site Description, a level of service analysis shall be performed for all arterial/arterial, arterial/collector, and collector/collector intersections, and for any other pertinent intersections identified by City staff. Also, level of service analyses will be required on all proposed site driveway locations for all nonresidential developments. The level of service analysis shall be based upon the highest hourly average a.m. or p.m. peak weekday volume or highest average hourly peak weekend volume as determined from a two-day survey of weekday volumes and, where necessary, a one-day survey of weekend volumes. The level of service analysis shall take into consideration the lane geometry, traffic volume, percentage of right-hand turns, percentage of left-hand turns, percentage (and typical size) of trucks, intersection width, number of lanes, signal timing and progression, roadway grades, pedestrian and bicycle flows, school routes, number of accidents, and peak hour factor.
- (b) Adequacy Analysis. The intersections included within the traffic impact analysis shall be considered adequate to serve the proposed development if existing intersections can accommodate the existing service volume, the service volume of the proposed development, and the service volume of approved but unbuilt developments holding valid, unexpired building permits at level of service “C” or above.
